

UNIVERSAL SMALL CYLINDER BLINDSTITCH MACHINE MODEL SL718-2

This versatile, dependable blindstitch machine gives you quality 1 to 1 non-skip and 2 to 1 skip stitch hemming on dresses, coats, skirts, trousers, cuffs, drapes and more. Its rugged construction also meets the demanding needs of light manufacturers.

1) Re-engineered for greater quality: Upgraded by former key personnel of the old U.S. Blindstitch Company, this machine builds upon the technology that made the original a world leader.

2) New presser foot, feed and looper: Re-designed for improved material handling and stitching, this new presser foot, feed and looper are exclusive on US stitch-line machines.

3) New bronze needle connection assembly: An investment-cast eccentric, fitted to a bronze strap, ground and lapped in to form a hard, smooth bearing surface, withstands years of abrasive wear.

4) Hardened shafts: Shafts are designed to reduce wear for a long life with minimal maintenance.

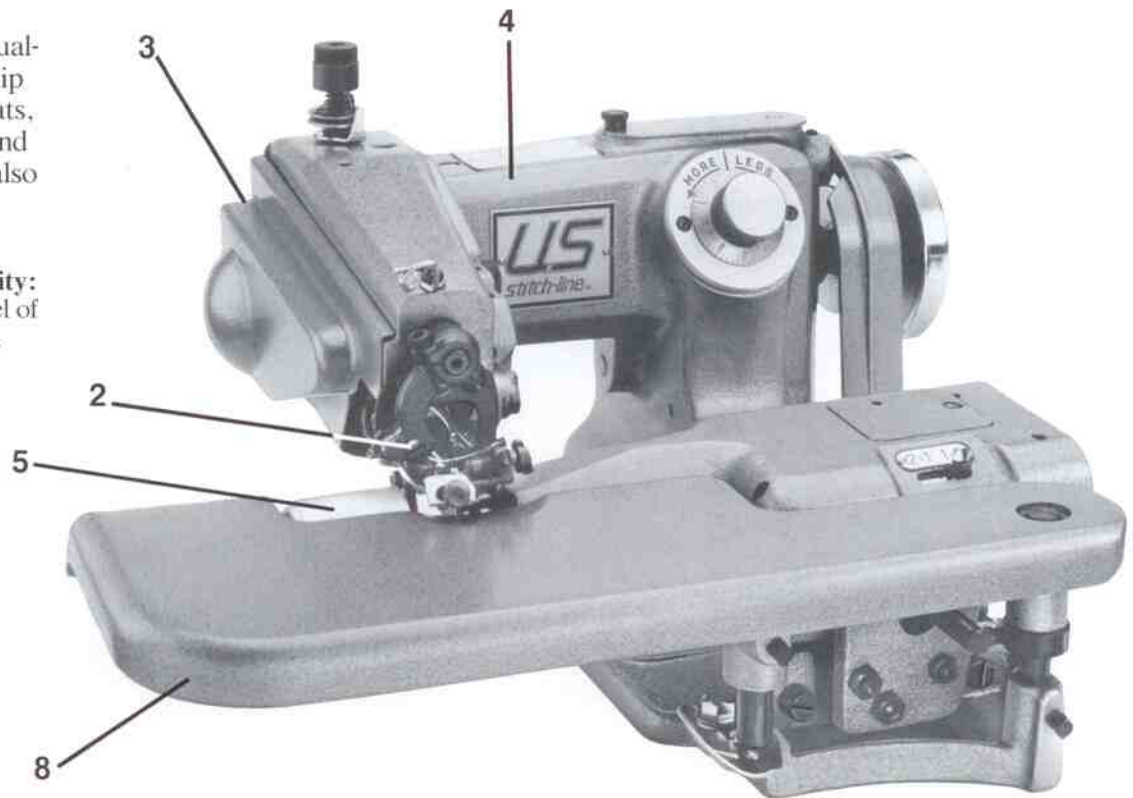

5) Narrow cylinder: Small diameter, aluminum-covered cylinder enables you to handle narrow leg, arm and head openings with ease without sacrificing feed capabilities. Narrow cylinder combines with special plattens and platten brackets to give you maximum feeding.

6) Variety of fabrics: Will handle light to medium weight cottons, knits, wovens, rayons and silk.

7) Variety of threads: Works with all threads including monofilament.

8) Swing plate: Sturdy support easily swings out of the way.

9) Needles included: All machines are prepared and shipped with a supply of Groz Beekert needles.
